August 12, 2026

Dear Hiring Manager,

I am writing to apply for the Junior Software Developer position. As a Software Engineering graduate from FAST-NUCES (2026), I am looking to bring the practical, hands-on development experience I built during my degree and early freelance work into a full-time role focused on growth, mentorship, and shipping real software — exactly what this opportunity offers.

Over the past year I have built and deployed full-stack applications end-to-end, which lines up directly with what the role calls for. As a freelance full-stack developer for UK and international clients, I worked across the JavaScript stack — Node.js, Express.js, and React — to design REST APIs, integrate third-party services, and ship features straight to production. During my internship at Vexed Solutions, I developed and deployed full-stack applications using MongoDB, Express.js, React.js, and Node.js, designing REST endpoints and integrating responsive frontends alongside an on-site engineering team.

On the database side, I have hands-on experience designing schemas, writing queries, and managing data across both relational systems (PostgreSQL, MySQL) and MongoDB, along with working knowledge of Python and SQL from both coursework and applied projects. I am comfortable troubleshooting and debugging across the stack, and I take code reviews seriously as a way to keep improving — a mindset that fits well with a team that values learning sessions and collaborative development.

I would welcome the opportunity to bring this foundation, along with a genuine willingness to learn and adapt, to your team as a Junior Software Developer. Thank you for considering my application — I have attached my CV and would be glad to discuss further at your convenience.

Sincerely,

Ameer Sultan
